

PROGRESSIVE FLEET

VENDOR REFERRAL NETWORK

Mobileye®, an Intel Company

The Mobileye AI-powered advanced collision avoidance system (ADAS) helps prevent collisions from happening. The system scans the road ahead and alerts the driver of potential hazards, in real time, with audio and/or visual warnings, providing time to prevent or mitigate a collision.

How it works

Approach your fleet's safety by avoiding collisions rather than reviewing them after the fact. Mobileye 8 Connect provides your drivers with another set of eyes on the road, never distracted or fatigued. The proactive solution helps train drivers to avoid dangerous situations in the first place through five real-time lifesaving alerts:

- **PEDESTRIAN & CYCLIST COLLISION WARNING** alerts drivers of an imminent collision with a pedestrian or cyclist ahead
- **FORWARD COLLISION WARNING** alerts drivers of an imminent collision with a vehicle or motorcycle ahead, both on highways and in urban areas
- **HEADWAY MONITORING & WARNING** helps drivers keep a safe following distance from the vehicle ahead and alerts them if the distance becomes unsafe
- **LANE DEPARTURE WARNING** alerts drivers when there is an unintentional deviation from the driving lane without the usage of the turn signal
- **SPEED LIMIT INDICATOR** recognizes speed limit signs, and notifies the driver of the new speed limit and if they exceed it

The optional Mobileye Connect Platform combines ADAS with traditional telematics G-sensor harsh event alerts in one system. Features include:

- **DRIVER SCORE** provides greater insight into drivers' progress on unsafe habits
- **TRACK AND TRACE** ensures vehicles stay on route and determines route efficiency and safety
- **SAFETY REPORTS** identify which drivers could benefit from extra training and which might be rewarded for safe driving
- **GEOFENCING** sets boundaries for fleet vehicles and notifies if they are crossed
